Freelance Web Designer

<https://www.facebook.com/Front-End-Web-Developer-100102858938720>

I am a freelance Web Developer for 3 years now. I like building things, especially in Web Development. I like new challenges and ideas. I have spent most of my career in Web Development. I have been exposed to HTML/CSS/CSS3, JavaScript, jQuery, and Bootstrap native PHP. Now, I am studying OOP PHP, and PHP Frameworks because these tools teach me more to write better code. I always keep a beginner's mind even though I'm already 4 years in the industry because I believe that there is always room for improvement. I specialize in building business websites that may help to achieve clients' marketing goals without breaking their budget. Every web design project includes the following:

Responsive Design:

- Your website will adapt its layout based on the size of the viewer's screen. This ensures that your website will function properly on computers, smartphones, and tablets.

Reliable Hosting:

- I host my clients with hosting provider. I've found Hosting Provider to offer the best reliability and security at affordable rates

Content Updates and Back Up:

- To be used effectively, your website should be updated depends on your request and a per services fee includes publication of update content and graphics and back Up at your per request.

Skills:

Skills: HTML-CSS/CSS3, PHP, JavaScript, Bootstrap5, UX/UI-Design

Client's Signature Over Printed Name
